DMT® TO VIGILANTLY DEFEND PATENTS

Marlborough, MA - Elizabeth P. Powell, chair and treasurer of DMT® Diamond Machining Technology, Inc., announced that DMT will vigilantly defend against any and all attempts to copy its proprietary interrupted surface patterns of diamond sharpeners. DMT is the original developer of the "polka dot" pattern of diamond sharpeners that have become synonymous with superior quality worldwide.

Attempts to copy the look of the familiar DMT pattern indicate that other firms are attempting to capitalize on the recognition of the quality and reputation of DMT products. Although copies may appear at first glance to be similar to the DMT products, evidence of the quality of workmanship falls far short upon closer inspection and use. DMT will remain vigilant in protecting its 26-year reputation for outstanding quality, superior design and innovation. DMT will continue to use only the finest quality micronized, monocrystalline diamonds in all its products. These, along with the use of high tech resin substrates and leading edge technology, give DMT products a tremendous competitive advantage for long-life, easy, quick sharpening and superior value.

Diamond Machining Technology, Inc. was founded in 1976 by David and Elizabeth Powell who were driven by a mission to develop the finest diamond sharpeners in the world. DMT's sharpening systems often have been copied but never equaled. Five DMT products have won the prestigious Blade Magazine Knife Accessory of the Year Award. The firm is the official provider of Diamond Whetstone™ sharpeners to both the USA Luge and US Speedskating Teams. They provide a full line of diamond sharpening tools for use in camping, fishing, hunting, woodworking, culinary arts, gardening and various industrial uses.
